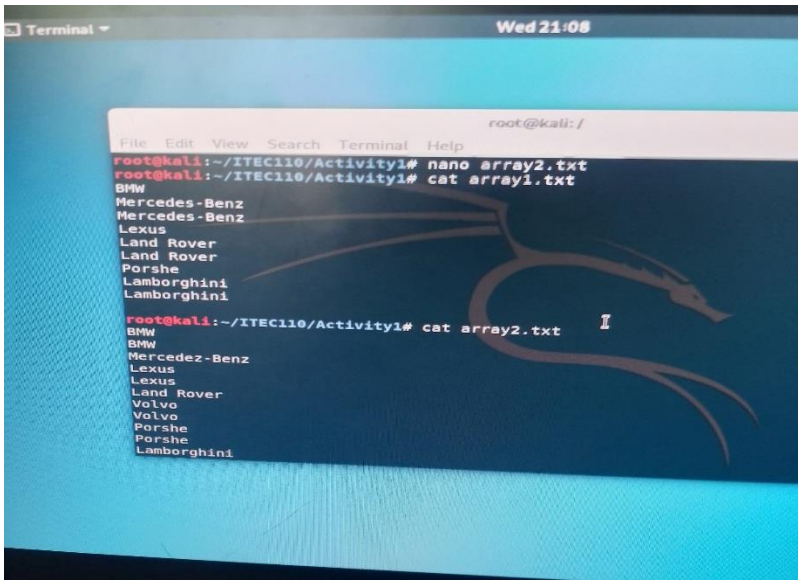
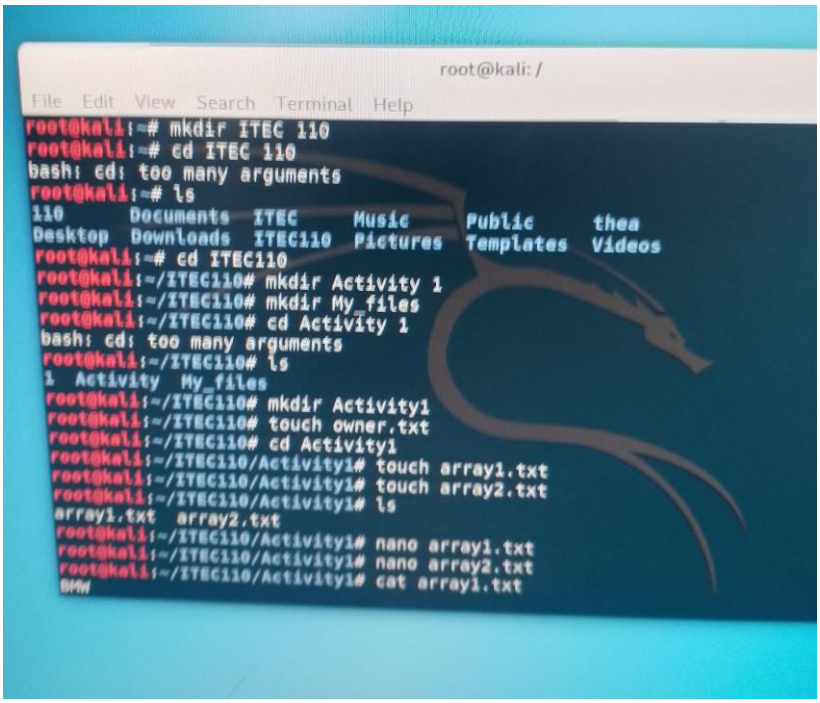
ITEC-110 - SYSTEM ADMINISTRATIO AND MAINTENAINCE
ACTIVITY #1

I. Screenshot of Laboratory Output





II. GIVE 5 COMMANDS YOU MASTER AFTER OUR ACTIVITY GIVE EACH COMMANDS THEIR PURPOSE, EXAMPLE AND RESULT

1. **pwd**

   Purpose: Shows your current directory (where you are in the system)

   Example: pwd

   Result: /home/kali/Desktop

   Meaning: It tells you exactly what folder you are currently working in

2. **ls**

   Purpose: Lists all files and folders in the current directory

   Example: ls

   Result: Documents Downloads Desktop notes.txt

   Meaning: It helps you see what's inside the folder you're in

3. **cd**

   Purpose: Used to change directory (move between folders)

   Example: cd Desktop

   Result: You move into the Desktop folder (no output, just location change)

   Meaning: It lets you navigate around the system like opening folders

4. **mkdir**

   Purpose: Creates a new folder

   Example: mkdir testfolder

   Result: A new folder named testfolder is created

   Meaning: Used when you want to organize files by making new directories

5. **rm**

   Purpose: Deletes files or folders

   Example: rm file.txt

   Result: The file file.txt is deleted (no output shown)

   Meaning: Be careful, this permanently removes files

III. REFLECTION AFTER OUR SESSION

After our session, I learned five basic Kali Linux commands that are very useful for beginners. First is `pwd`, which shows your current location in the system so you always know where you are working. Next is `ls`, which displays all the files and folders inside the directory you are in, making it easier to see what is available. The third command is `cd`, which allows you to move from one directory to another, like going into different folders. The fourth command is `mkdir`, which is used to create a new folder for organizing files. Lastly, `rm` is used to delete files or folders, but it must be used carefully because the deletion is permanent. Overall, this activity helped me realize that Kali Linux is not as complicated as it looks. Once you understand these basic commands, navigating the system becomes much easier and more natural with practice.
